BINANCE SMART CHAIN

Binance Smart Chain (BSC) was developed as a means of utilizing solidity-based smart contracts with much greater speed and efficiency than other, competing chains.

With decentralized exchanges on BSC offering lightning fast swaps and extremely low fees, BSC has started to become one of the most widely used blockchains for Decentralized Finance (DeFi). BSC uses a token protocol developed by the Binance Team called BEP-20, and \$JESUS token is one of the many BEP-20 tokens on the market today.

2

DEFLATIONARY ASSETS

On the Ethereum Blockchain deflationary cryptocurrencies have seen a great deal of interest in recent years. The idea behind deflationary cryptocurrencies is relatively straight forward. Each time a transaction occurs using a deflationary token, a percentage of the tokens used in the transaction are destroyed permanently. This function is constantly at work removing tokens from the total available supply. Over time, this action works to help increase the value of one token dramatically as it increases scarcity.

REFLECTIVE FUNCTIONS

Reflective cryptocurrencies progress beyond simply burning tokens, they take a determined percentage of the total transaction amount and 'reflect' it back to every wallet that holds the reflective token to match.

This is 'reflected' to wallets based on the proportion of total supply that they hold. For example, a 'reflection' rate of 6.2% would mean that 6.2% of every transaction would be paid back to wallet holders.

This process incentivises a large holding as larger wallets receive a higher percentage of each 'reflection'. This mechanism also encourages holding rather than selling for a quick gain due to the 'reflections' received, but also the tax incurred on each transaction.

TOKENOMICS

The \$JESUS token combines the best features of other passive yield tokens into one smart token. The \$JESUS token removes the requirement to stake or lock up your tokens on another website or Dapp to receive rewards.

Simply holding \$JESUS in a Binance Smart Chain compatible wallet will see the holders balance grow with every transaction that takes place.

This removes the time and effort required to 'farm' and 'harvest' tokens, and ensures you maintain ownership of your coins without having to give authorisation and access to your wallet to external parties.

5

TOKENOMICS

The \$JESUS token contract functions apply a special tax to every transaction, whether it be a buy, sell, or trade.

With each transaction 6.2% is reflected back to holders' wallets, while 3.8% is burned forever, reducing the total supply over time. (Total tax is set to 10% and can never exceed 10%, however the proportion that is reflected or burned can be adjusted from the current 6.2% & 3.8% ratio to best suit the \$JESUS ecosystem) \$JESUS takes the best elements of similar tokens and combines them in order to create a unique passive yield generation token.

Pre-Sale Price: 1 BNB = 40,000 \$JESUS

Total Supply: 10,000,000 \$JESUS

6

TOKENOMICS

5,000,000 tokens were sold during the pre-sale and 4,000,000 tokens were added to the Pancake Swap Liquidity Pool along with 100 BNB collected from the pre-sale.

The remaining 1,000,000 tokens are reserved for future funding such as team payments, professional fees such as contract audits, development fees, marketing, and community contest prizes.

50% of the PancakeSwap Liquidity Pool Tokens were burned (sent to a dead address), therefore this liquidity is locked forever (proof of this transaction is available in the links section).

The remaining Liquidity Pool Tokens are reserved for future exchanges and possible farming pool partnerships.

ECOSYSTEM

DAO GOVERNANCE

Beyond the development of the Jesus Finance Project and JesusDeFi.com, the project will look to build an entire ecosystem that is centered around the \$JESUS token.

Future plans include but are not limited to:

A transition to a Decentralized Autonomous Organization or “DAO” infrastructure. As a community driven project the Congregation will have a say in the future direction of the Jesus Finance Project and JesusDeFi.com.

This will be accomplished by incorporating a governance system that allows the community to vote on any major changes. Voting power will be based on a users total holdings in the JesusDeFi.com Ecosystem.

ECOSYSTEM

FARMING PLATFORM

A farming platform designed to reward the most loyal members for providing liquidity to the trading pair.

Liquidity provider "LP" tokens will be staked on this platform and rewards will be distributed via smart contract.

This program will provide incentive for current \$JESUS holders to do more with their tokens and help the project grow. Staking LPs will enable users to earn passive rewards from Jesus Finance but also trading fees from PancakeSwap that are paid directly into the LP token value.

Furthermore, the reflect function will still pay \$JESUS to tokens held in a LP token.

g

ECOSYSTEM

COMMUNITY OUTREACH COMPETITIONS

New community outreach competitions using \$JESUS tokens as a reward for spreading the word about Jesus Finance. These competitions will be led by our core community members and will be designed to grow our Congregation one follower at a time.

TRADEABLE NFTs

Unique Jesus Finance trade-able NFT collections minted on Binance Smart Chain and distributed to our community via contests and games.

BLOCKCHAIN BASED GAMES

Fun new blockchain technology based games utilizing the \$JESUS token as in-game currency.

10

COMMUNITY INVOLVEMENT

The Jesus Finance community will be instrumental to the future of the project.

The liquidity burn and passive yield mechanism are designed to make the community comfortable holding \$JESUS for long periods without the fear of a rug-pull or using external websites to 'stake'.

Jesus Finance has plans to make monthly charitable donations. These recipient charities will be decided by the community via surveys in the official Telegram group.
